Reasons of Using Open Source in Asia Pacific Corporation

- Easy access of source code.
- Open source network support.
- No software evaluation and usage difficulties.
- Low “vendor lock-in”.

Source: IDC, 2008

- Building a strong **corporate image** by deploying **legal software**
- A **license** governing every software
 - Intellectual property right (IPR)
- **Legal compliance** issues among users
 - Be legal (buy only **licensed software**),
or
 - Open Source Software (OSS) as
solution

- Background
- **OSS Readiness**
- OSS Utilization & Implementation

1. In line with IT global trends – Paradigm transformation from "**total cost**" to "**total value**" → shifting the focus of IT value from "**business value**" to "**public value**"
2. **Government initiatives** on using OSS
3. TELKOM's **OSS desktop implementation** begin with small scale in 2005.

- Standardization collaboration format
- Lack of familiarity (user)
- Compatibility
- Implementation Roadmap
- Community development
- Limited warranty

- Only adopt proven / **mature OSS** functionalities technology.
- Establish an open source **community** in TELKOM
- Intensive Awareness & **Trainings**
- More focus on client computing / **desktop oriented**
- **Limited use** in core applications
- Start from community/unit before enterprise-wide deployment and segmenting based on user profile.
- Standardization: Standard Operating Environment, Standard Software Catalogue.

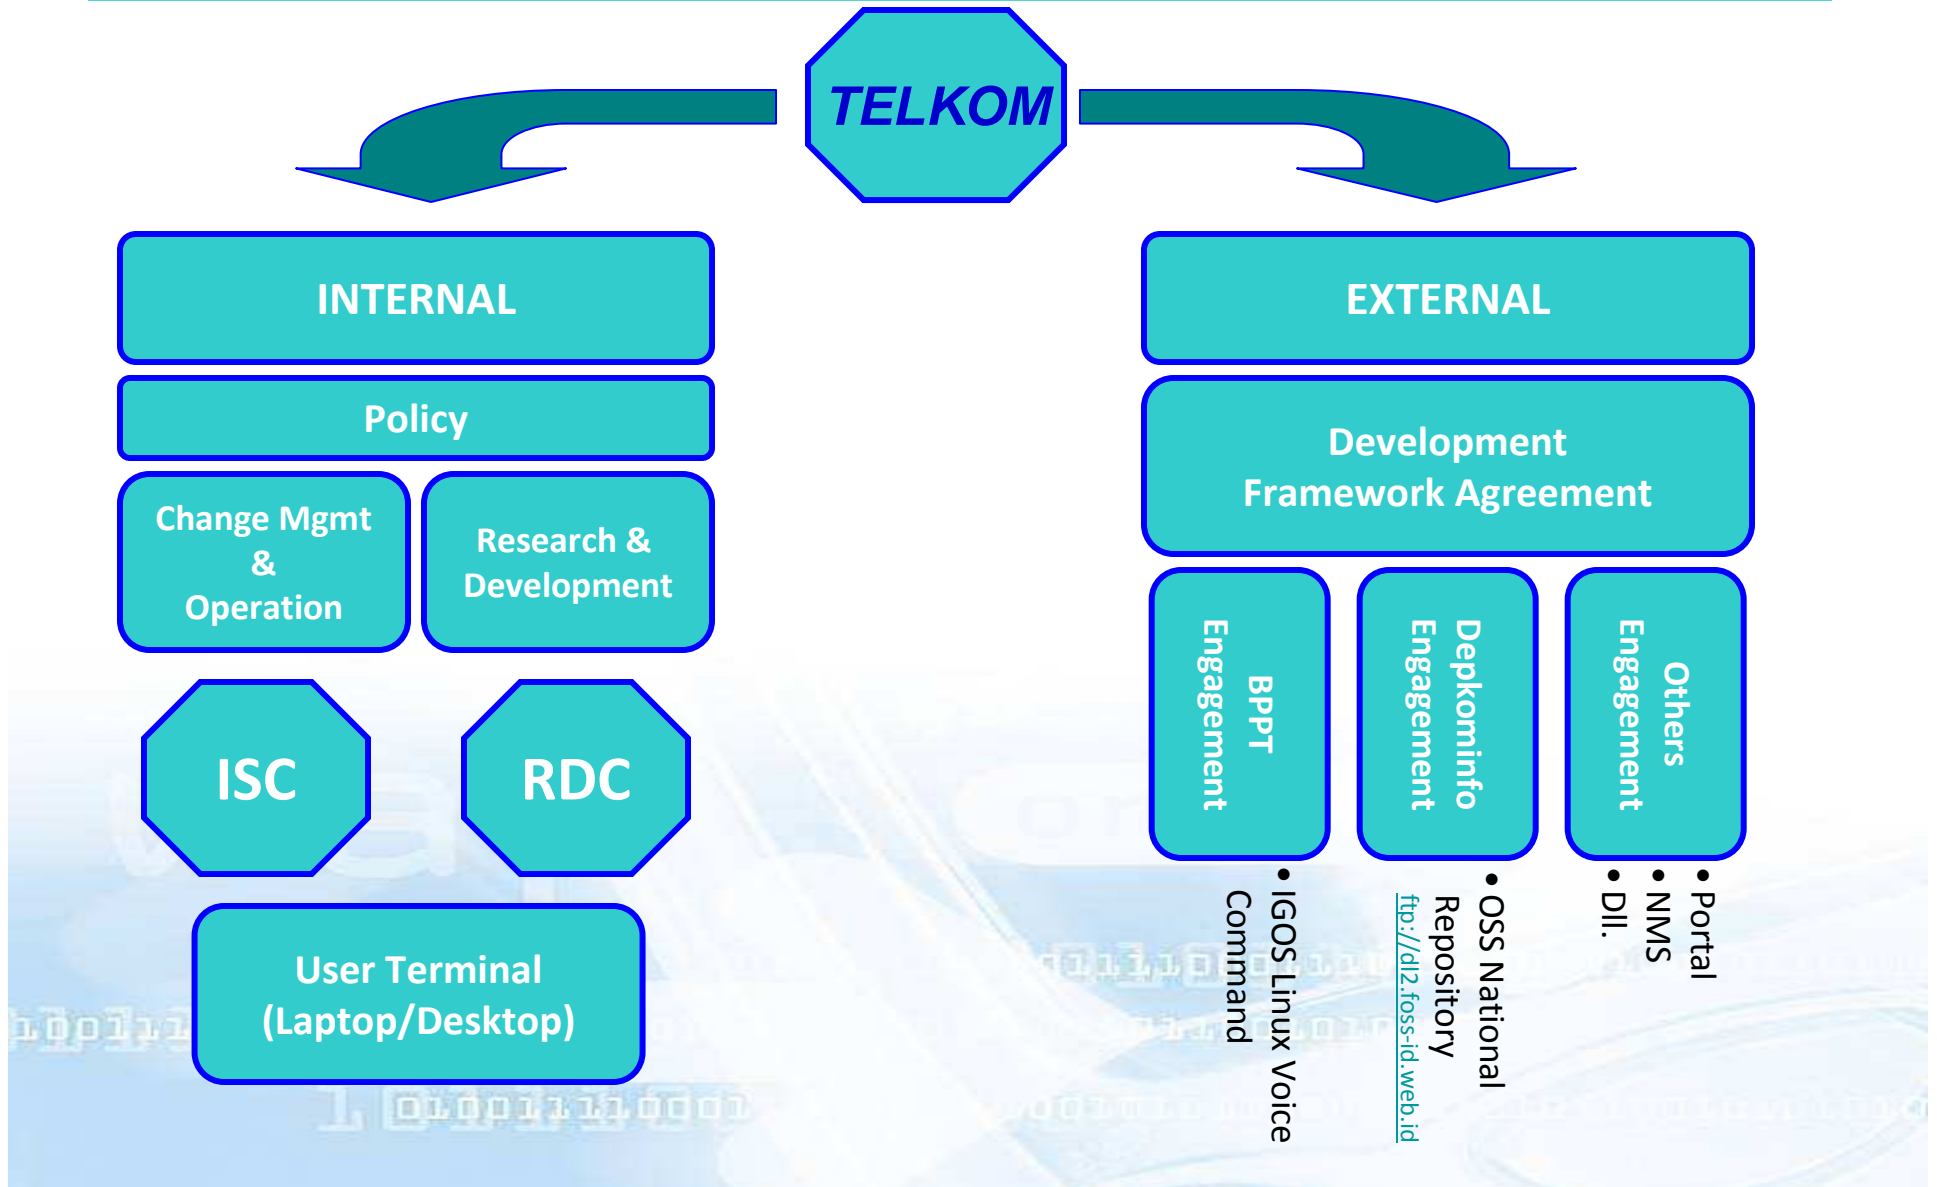

- Create a company policy
 - Legal
 - Business
 - Community
- Communicate
 - Customers
 - Partners
 - Community
- Monitoring & Evaluation
 - Awareness Survey
 - Desktop Management Tools

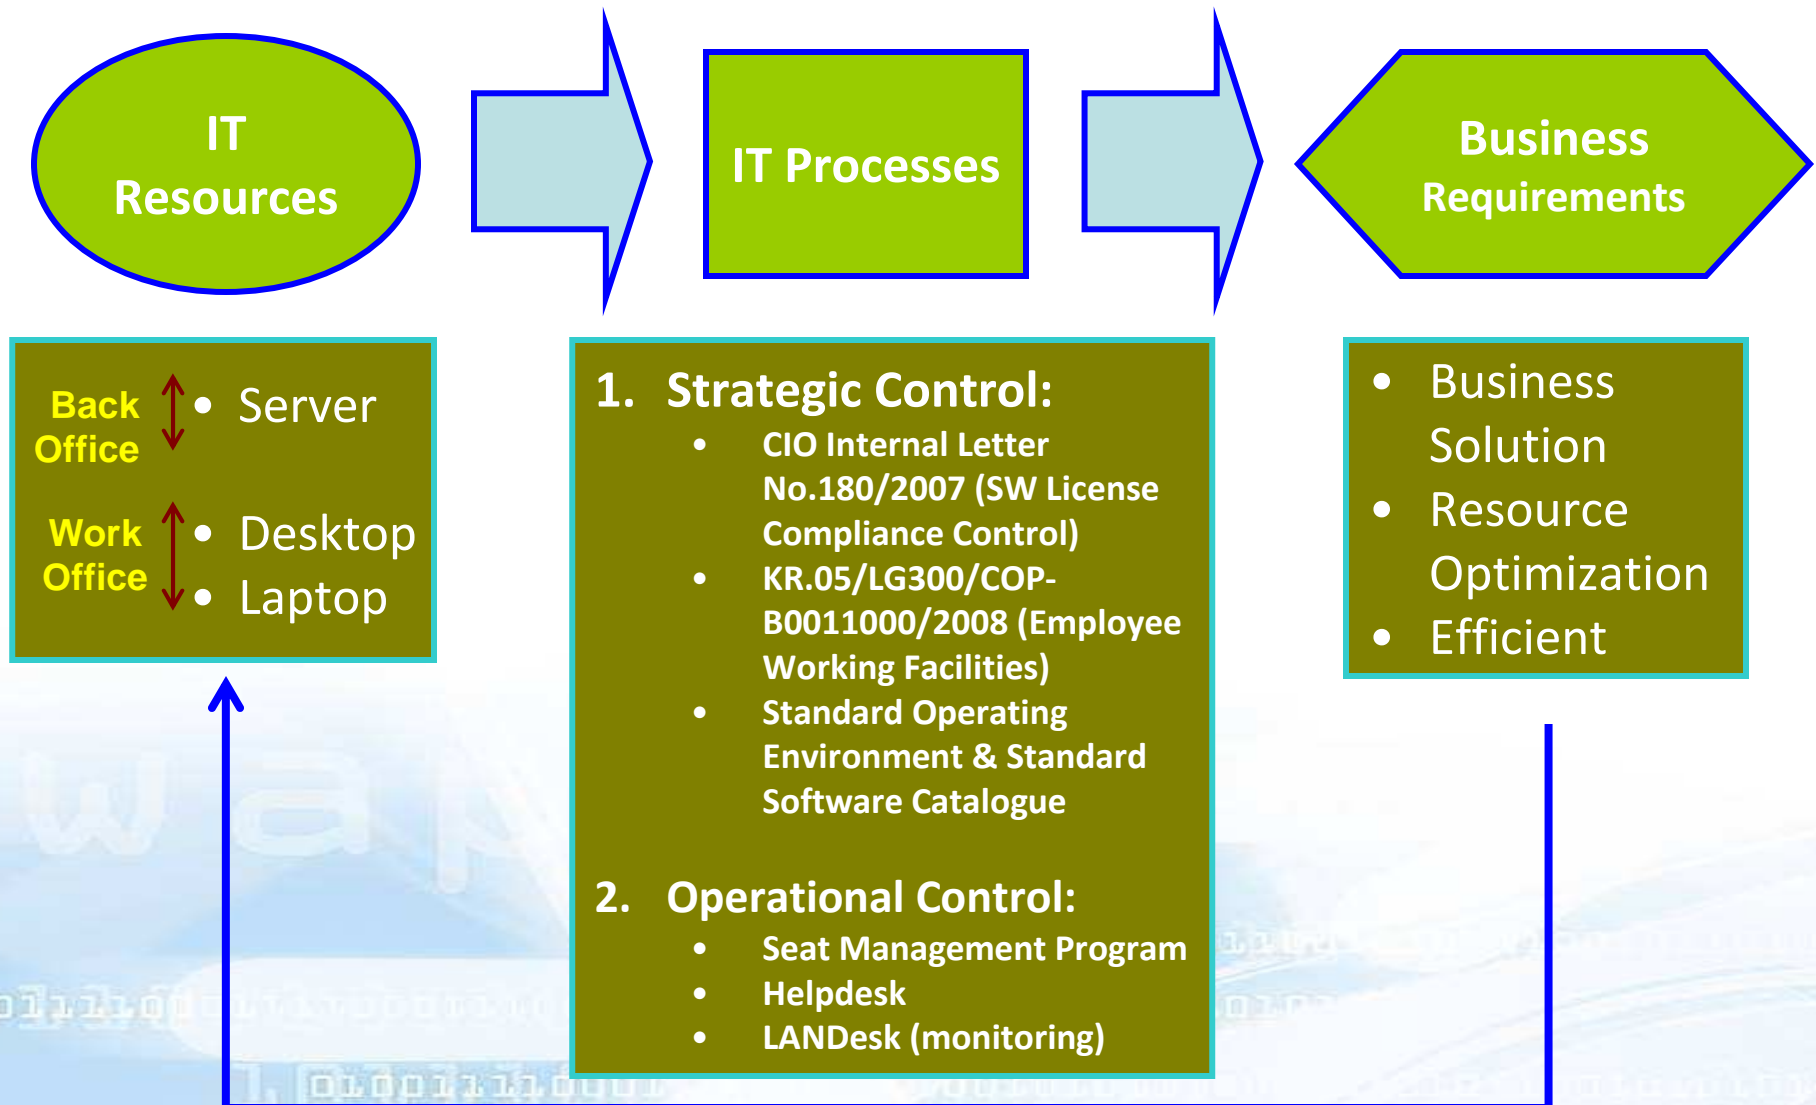

- Background
- OSS Readiness
- **OSS Utilization & Implementation**

TELKOM Initiatives

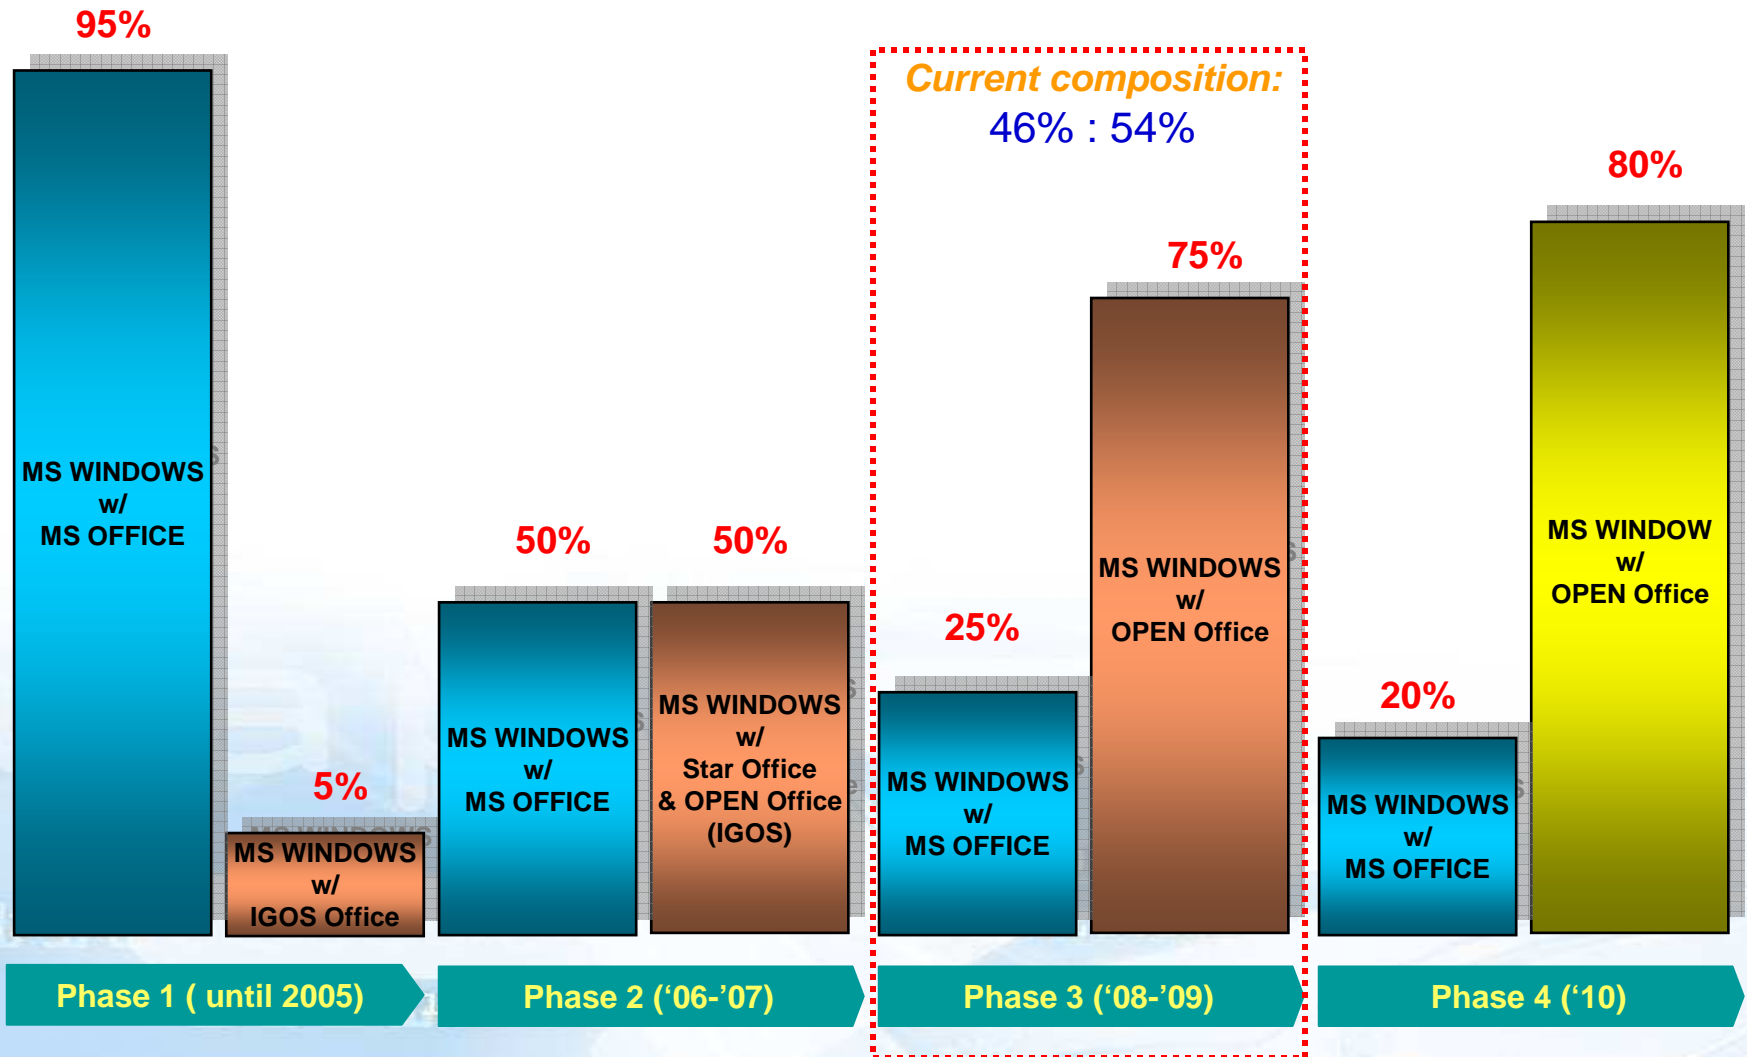

TELKOM OSS Implementation Framework

OSS Implementation Roadmap & Status

Seat Management

- **Radius**

- FreeRadius, implemented at 48 sites / cities for Speedy Radius Database
- MySQL , implemented at 48 sites/ cities for Speedy Radius Internet Service
- DNS BIND 9.x, implemented for Telkom internal DNS system
- PROXY SQUID 5.x, implemented for Telkom internal PROXY system

- **Operating Systems**

- Linux, for CCBS

- **Desktop**

- Open Office 2.4,
- Thunderbird 2.x, email
- Firefox 3.x, browser

TELKOM proud to use OSS...

MRTG is our tool for measuring network & server performance

Without compromise we using **Java** technology for enterprise application

Our high performance web server with very intensive hit just running on **Apache**. **PHP**. **MySQL** & **Tomcat**

Squid for reliable proxy to deliver internet service over 1.5 million customer.

To deliver Naming Service (DNS) over more 1.5 million customers we just rely on **BIND**

Behind Notes™, we running robust **Postfix** as SMTP Engine to deliver messages over 30.000 employee & 1.5 million customers

Linux & **FreeBSD**, the cute operating system for running our Web Hosting services

FreeBSD

- **Top → Down Policy is required**, as implementation force.
- **Adequate helpdesk support is required.**
- **Training of Trainer is required.**
- **Implementation is done in staged**, equipped with unit scale pilot project.
- **OSS Community Facilities is required**, well managed national / regional / TELKOM wide coverage, for OSS information sharing.
